POWERFOG 100

POWERFUL FOGGER FOR LARGE SPACES FOR POULTRY

Complete treatment from 1 spot (100+ meter)

The Powerfog 100 is the powerhouse of the Powerfogger line. The proven technique of a blower is combined with a powerful ventilator to make fine aerosols that are pushed well over 100 meters. This makes it possible to disinfect an area of 8000m³ in one hour.

De Powerfog 100 has its own stainless steel frame with wheels, but can also be easily lifted by fork lift. The fully automated Powerfog 100 makes for an easy and quick fog treatment without any interruptions or obstructions. The machine rinses itself and cleans automatically after use. All parameters in the software can be configured to your own wishes and the requirements of the room. It's also possible to use your own software.

Depending on the options on your fogger, your product may look different from the image.
