

POWERVACCINATOR

AGILE AND FLEXIBLE VACCINATION STATION

The Powervaccinator makes vaccination a piece of cake

The Powervaccinator holds true to its name. With this machine you will set record times while vaccinating your chicks. With a maximum of twelve spray heads you can vaccinate multiple stories at once. There's no need to be afraid of waste material: all heads can be shut off individually, but can also be adjusted in height, width, rotation and spray image. This way you can put the power where you need it, or take a step back when you don't. This machine can also be used for other, non-vaccination, spraying purposes. The stress levels of the animals will remain low because of the quiet engine. You can spray up to four hours on the battery. There's no cables attached, which makes it even easier to walk through your rows with this narrow and agile device.

Depending on the options on your fogger, your product may look different from the image.

FOGGING & HYGIENE

POWERVACCINATOR

AGILE AND FLEXIBLE VACCINATION STATION

Specifications

- Electrical 12 volt motor
 - Very quiet, to avoid stress in animals
- 4 hour non-stop spraying on a single battery
