

TURBOFOGGER

THE BEST HANDHELD FOGGING DEVICE FOR DISINFECTION & AREA TREATMENT

Versatile handheld fogger with a abundance of uses

The Turbofogger is a portable electric fogging device. The turbine engine combined with a venturi nozzle produce a fine mist, suited for disinfection, vaccination, pest control or other area treatments by dispersing aerosols. Due to its compact design the Turbofogger can be used in various environments, from small compartments to larger production halls. Made from stainless steel and viton, the Turbofogger is able to fog almost any fluid. Therefore the Turbofogger is the go-to fogging device for treating houses, office spaces, medical environments and hospitality business. The Turbofogger is suitable for treating up to 3000 m³.

Depending on the options on your fogger, your product may look different from the image.
