

WHEEL DISINFECTION UNIT - WDU

AUTOMATIC WHEEL DISINFECTION UNIT FOR DISINFECTING WHEELS OF LORRIES

A safe and clean lorry with one press of a button

Cross contamination is an important source of infection at agri-food transport. Not only the load, but also the wheels are a hidden source of infestations. As a transporter you therefore ensure good hygiene of your lorry. But cleaning the wheels and the trailer after every destination results in a lot of hold-up.

The Wheel Disinfection Unit provides the solution to this. **The WDU can be activated from the drivers seat** and can be used while on the road to disinfect the wheels. The unit is tucked under the chassis in the included safe box. The WDU is a perfect match with the Truck Disinfection Unit, which disinfects the inside of the trailer. With the both of them, you have a total disinfection within hand's reach.

FOGGING & HYGIENE

WHEEL DISINFECTION UNIT - WDU

AUTOMATIC WHEEL DISINFECTION UNIT FOR DISINFECTING WHEELS OF LORRIES

Specifications
