

AUTODOS

AUTOMATIC FILLING AND DOSAGE SYSTEM

MORE SECURITY, LESS WORK

AUTODOS automatically fills a tank with the desired concentration and correct amount of disinfectant and water. Ratios can be adjusted by operator or quality manager and can be password-protected.

SUITABLE FOR HIGH CONCENTRATIONS

BENEFITS OF AUTODOS?

1. Labour savings

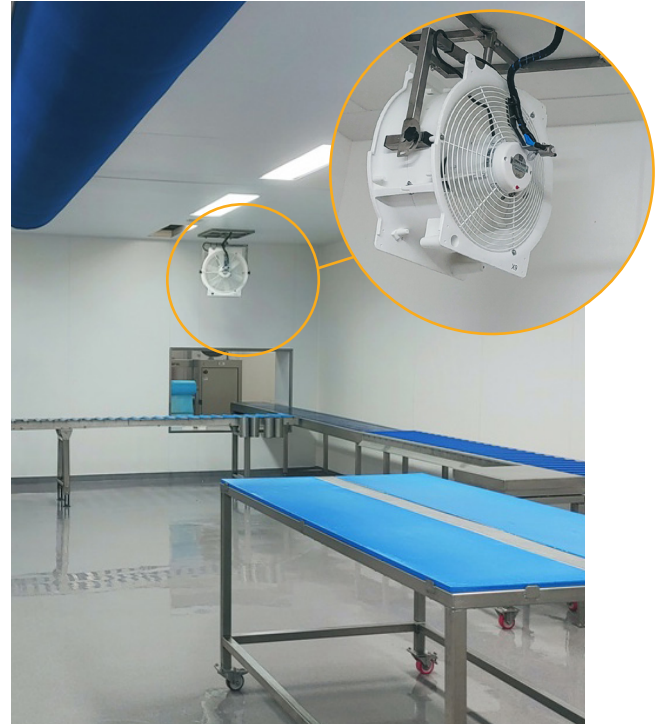

Avoids human error in manual dosing, improves the quality of disinfection, enhances the quality of products.

2. Always fresh premix

The system detects if a tank is almost empty and adds pure disinfectant and water in the desired dosage.

3. Acids and peroxides

Acid- and peroxide-resistant pump and flow sensor make premixing in high concentrations (such as 25 or 50%) possible.

FOGGING & HYGIENE

AUTODOS

AUTOMATIC FILLING AND DOSAGE SYSTEM

SPECIFICATIONS

- **Automated system**
- Low maintenance
- Connected to the water supply
- Disinfectant can be pumped into a jerry can, 200 litre drum or IBC container
- Empty sensor on suction lance
- Amount of disinfectant used is recorded

Capacity

Depending on configuration.

Air throw

n/a.

Droplet size

Depends on agent.

Tank size

n/a.

Power

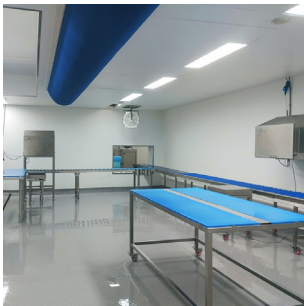

Depending on configuration.

Mobility

Fixed installation.

WHICH SYSTEMS CAN AUTODOS BE APPLIED TO?

Halofog Food

Cart Disinfection Station

Coldfogger Installation
