FOGGING & HYGIENE FOR POTATO STORAGE

www.veugentech.com

TAKE CONTROL OF POTATO STORAGE YOURSELF

Good sprout inhibition is needed to preserve potatoes longer and prevent quality loss. Many factors play a role in proper treatment with the available sprout inhibitors. The layout of the storage shed, the ventilation system, the variety, the condition of the potatoes. With our spraying equipment, we offer suitable solutions (techniques) that allow you to keep control. Together, we ensure that you can easily administer sprout inhibitors yourself, at a time that suits you without loss of quality.

POWERFOGGER P60

The fully automated fogging programme (plug&play) ensures that you can start treatment at a time that is convenient for you time that suits you, you are no longer dependent on third parties and after the programme it switches off automatically.

DETACHABLE NOZZLE

The Powerfogger P60 is now also available with removable spray head (can also be placed on stand) and with extended hose. This makes the unit even easier to position outside the area to be treated.

Option: detachable nozzle

SPROUT INHIBITION EFFICIENT, SAFE AND RELIABLE FOGGING

SYNOFOG

The Synofog is specially designed for fogging germ inhibitors. Due to the innovative design of the heating chamber and liquid injection, the energy used is efficiently converted to fogging capacity.

POWERLIMIT

If you are faced with a shortage of power, the Powerlimit allows you to set a maximum power consumption of the Synofog. This reduces the current and makes it possible to treat in warehouses with a small power supply. This provides more flexibility and makes the Synofog suitable for a larger number of storage spaces.

IMPELLER HEAD

Significant improvements for the Synofog; a backplate with integrated impeller head.

Some advantages:

- ☑ No more changing nozzles
- ☑ Better conversion from agent to fog
- ☑ Pressureless, so greatly reduced pump wear

SPROUT INHIBITION

POTATOFOGGER

Suitable for small growers

The Potatofogger is ideally suited for fogging sprout inhibitors. The guaranteed droplet size of less than 10 microns ensures that every surface in the potato storage is treated evenly. The robust design of the spray head, with its chemically resistant hose and stainless steel components, ensures a trouble-free and reliable system.

HALOFOG P9

Suitable for contract workers

The proven Halofog technology now also in potato storage.

A manual system that can be used both inside and outside the potato storage. An expandable (number of nozzles) as long as the compressed air capacity is sufficient, resulting in a high misting capacity per hour. While maintaining a small droplet size for good results. The spray heads are fitted as standard with a protection bracket over the head.
