

HALOFOG 900

FOGGING MACHINE FOR DISINFECTION

Fog more and better in less time

The Halofog 900 (Mobile Fogging Station) is a cold fogging device. Using a nozzle specially developed for fogging, compressed air converts the liquid into a very fine mist. The Halofog 900 is extremely reliable and maintenance-friendly. Scaling up capacity is easy.

The Halofog 900 is suitable for spraying disinfectants. The air regulator can be used to control the flow of liquids. In order to obtain an even spray and to check the exact output of the unit, it is advisable to regulate the droplet size and the liquid output with the change of dosing nozzle.

Depending on the options on your fogger, your product may look different from the image.

FOGGING & HYGIENE

HALOFOG 900

FOGGING MACHINE FOR DISINFECTION

Specifications

- Fogging machine on compressed air
- **No power supply needed**
- Detachable nozzle
- Mechanical on/off
- Small droplet size for wider range
- Low maintenance

Capacity

25 - 100 liters an hour,
depending on the configuration.

Tank size

25 liters.

Air throw

25 meters.

Power

900 liters per nozzle
per minute
a 6 bar compressed air.

Droplet size

16 μ m.

Mobility

Mobile,
but not during fogging.
