

HALOFOG 900P

POWERFUL MISTING TECHNOLOGY FOR OPTIMAL STABLE CONDITIONS.

Halofog in poultry: efficient, safe and proven effective.

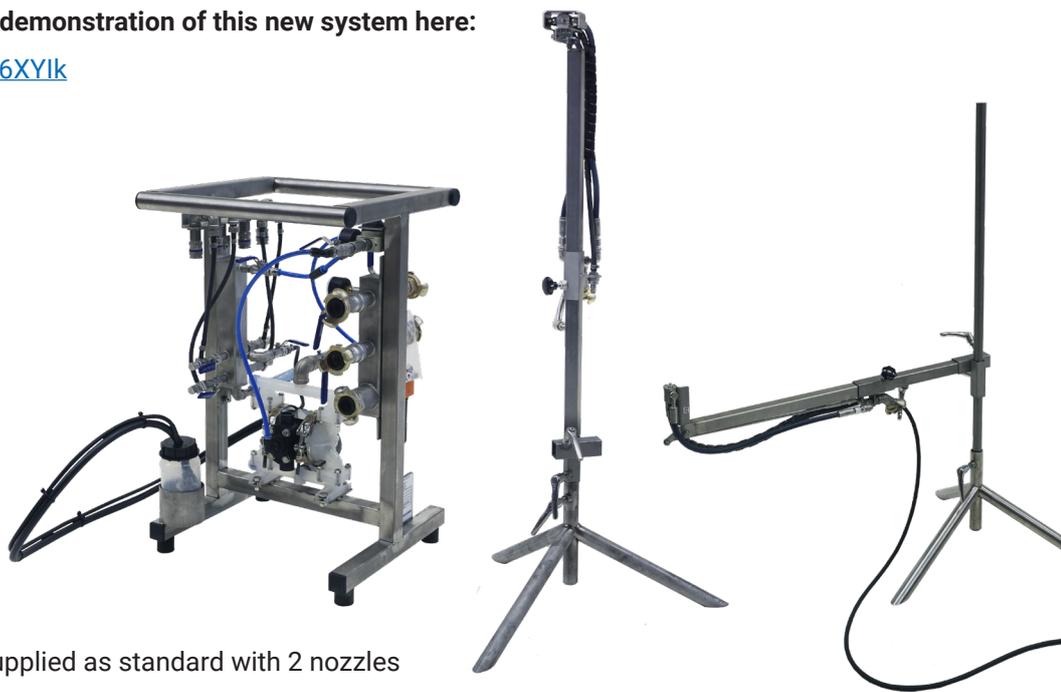

The manual system is flexible in use: it can be set up inside or outside the stable, with treatment taking place via a duct leading into the stable. The number of nozzles can be increased as long as the compressed air capacity is sufficient, ensuring high fogging performance per hour. The **Halofog 900P** achieves maximum processing capacity while maintaining a fine droplet size for effective operation.

Meet the Halofog 900P, the solution for:

- **Effective disinfection** after cleaning the stable.
- **Red mite treatments.**
- **Preventive (periodic) air treatments** with chickens in the stable.

You can view a demonstration of this new system here:

Basic model; supplied as standard with 2 nozzles

FOGGING & HYGIENE

HALOFOG 900P

POWERFUL MISTING TECHNOLOGY FOR OPTIMAL STABLE CONDITIONS.

Specifications

- Can be connected to your own compressor
- No heat source required
- **Manual system**
- **Can be expanded with multiple nozzles (up to 4 pieces)**

Capacity

20 - 60 liter*
per hour per nozzle.

Tank size

Possible to use your own barrel.

Air throw

50 meter.
depending on stable height/
width.

Power

900 liter per nozzle
per m. 6-bar compressed air.

Droplet size

16 µm.

Mobility

Movable
not during fogging.

* Capacity is always dependent on agent and other external factors
