

ULTRAFOGGER

THE FOGGING MACHINE FOR DISINFECTION HATCHING EGGS

The driest fog for the best results.

The ultrafogger is specially developed for fogging disinfectants into hatching egg storages. The average droplet size 5 micron keeps the eggs completely dry, keeping the embryo safe. The Ultrafogger is suited for every day use with hydrogen peroxide and does not harm eggs being disinfected in the first five days.

Depending on the options on your fogger, your product may look different from the image.

FOGGING & HYGIENE

ULTRAFOGGER

THE FOGGING MACHINE FOR DISINFECTION HATCHING EGGS

Specifications

- **Developed for disinfection of hatching eggs**
- Complete integrated fogging system for volumes up to 200 m³
- Only 230V needed for use
- Easy to use, no chance of any clogged nozzles
- Droplet size ± 5 micron guaranteed. Certificate available
- Dry fog keeps the eggs dry for the best results
- System can be completely automated
- Also available with exhaust system, warning lights and signals, fans, locks, fluid sensors
- **Proven results in hatcheries and food processing facilities**

Capacity

1 - 4 litres/hour.

Tank size

Variable

Air throw

n/a.

Power

230 V.

Droplet size

± 5 μ m.

Mobility

Fixed installation.
