POWERFOG TB100

POWERFUL FOGGER FOR LARGE SPACES IN HORTICULTURE

Complete treatment from 1 spot (100+ meter)

The Powerfog TB100 is the powerhouse of the Powerfogger line. The proven technique of a blower is combined with a powerful ventilator to make fine aerosols that are pushed well over 100 meters. The large capacity makes it possible to move 30,000m^3 of air per hour. Also ideal when there is a lack of support ventilation.

De Powerfog TB100 has its own stainless steel frame with wheels, but can also be easily lifted by fork lift. The fully automated Powerfog TB100 makes for an easy and quick fog treatment without any interruptions or obstructions. The machine rinses itself and cleans automatically after use. All parameters in the software can be configured to your own wishes and the requirements of the room. It's also possible to use your own software.

Depending on the options on your fogger, your product may look different from the image.
